PROFILE

3rd-year CSE student with hands-on experience building and deploying full-stack web applications using React/Next.js and Node/Express. Shipped two production-deployed projects integrating OpenAI, Stripe, and cloud storage APIs across authentication, payments, and real-time data flows. Targeting an entry-level software development role where I can contribute to real codebases from day one.

EDUCATION

Gyan Ganga Institute of Technology and Science — B.Tech, Computer Science Engineering | 2023 – 2027

Maharishi Vidhya Mandir (CBSE) — Senior Secondary | 2022 – 2023 | 76%

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, HTML, CSS

Frontend: React.js, Next.js, Tailwind CSS, EJS

Backend: Node.js, Express.js, Spring Boot, REST APIs

Database: MongoDB Atlas, MySQL, Mongoose ODM

Auth & APIs: JWT, Passport.js, OpenAI API, Stripe API, ImageKit API, AWS (S3, EC2)

Tools: Git, GitHub, Docker, Vercel, Postman, Figma, VS Code, IntelliJ IDEA, MySQL Workbench

Core CS: Data Structures & Algorithms, OOP, DBMS

PROJECTS

QuickGPT – AI Chatbot SaaS Platform [GitHub](#) | [Live](#)

- Architected a multi-tenant AI chatbot SaaS with 12+ REST endpoints across auth, chat, credit, and payment domains; JWT middleware enforces role separation across free, paid, and admin tiers — cross-user data isolation verified under concurrent sessions.
- Wired OpenAI API for token-streamed responses (~3-4s first-token latency) with client-side typing animation; integrated ImageKit API for AI image generation at a separate credit rate (1 credit/message, 2 credits/image).
- Built a Stripe credit economy across 3 purchase plans — balance deducted per API call and reflected in real-time on the UI; 50-100+ chat sessions persisted in MongoDB Atlas with search and cross-session continuation.
- Gated every data-access route with role-based middleware and graceful fallbacks so failed OpenAI or Stripe calls never crash the active client session or corrupt the credit balance.
- Structured the Next.js frontend with reusable components and optimistic UI updates — credit balance and chat history reflect changes instantly without waiting for a full server round-trip.

Tools: Next.js, Node.js, Express.js, MongoDB Atlas, OpenAI API, ImageKit, Stripe, JWT, Vercel

Wanderlust – Airbnb-Style Hotel Listing Platform [GitHub](#) | [Live](#)

- Designed 3 Mongoose schemas (Listing, User, Review) with relational references; ~30 live listings support image upload, star ratings, and owner-only edit/delete — all behind Passport.js session auth with MongoDB Atlas session persistence across server restarts.
- Wrote Joi server-side validation across 2 schemas — 6 listing fields, 10 enumerated category tags, 2 review fields — blocking malformed payloads before any write reaches MongoDB.
- Built 11-attribute search and filter (location, price range, category tags, property type); ~30 listing photos stored in Cloudinary and served via CDN, keeping page load independent of server storage.
- Delivered the full UI as EJS server-rendered templates; unauthorised create/edit/delete requests intercepted at the Express middleware level and redirected — no client-side-only access control.
- Implemented MVC project structure separating routes, controllers, and models — each listing and review operation is handled by a dedicated controller, keeping route files under 20 lines each.

Tools: Node.js, Express.js, MongoDB, Mongoose, Passport.js, EJS, Cloudinary, Joi

CERTIFICATIONS

- AWS Certified Cloud Practitioner** (Valid: May 2026 – May 2029)
- Oracle Certified Java Programming**
- Oracle SQL Certification**
- Cisco Python Certification
- AWS Generative AI Fundamentals

ACHIEVEMENTS & LANGUAGES

- Solved **530+ DSA problems** on LeetCode across arrays, graphs, DP, and trees; best contest rank **~1,500 / 36,000+ participants (top 4%)**.
- Competed in multiple national-level coding hackathons, scoping and building full-stack prototypes within 24-48 hour windows.
- Hindi (Native) | English (Professional Working Proficiency)
